

ARJUN PRASAD

Senior Backend Engineer | Distributed Systems & Payments

+91 8860741978 | arjunpd1998@gmail.com | LinkedIn | Portfolio

PROFESSIONAL SUMMARY

Backend engineer with 4.5+ years building high-throughput payment systems at PhonePe - India's largest digital payments platform serving 500M+ users. Currently on the UPI Core Transactional team handling 20,000+ RPS and 500M+ daily transactions. Previously owned distributed microservices processing 4M+ billpay transactions daily (500 RPS peak) across BBPS infrastructure. Built greenfield services, reduced infra costs 45% with a custom async framework, and eliminated operational bottlenecks at scale. Seeking Senior Backend Engineer roles.

TECHNICAL SKILLS

Languages: Java (8-17), C++, SQL
Frameworks: Dropwizard, Spring Boot, Hibernate, JUnit, Maven
Databases: MariaDB (Sharded), Aerospike, MySQL
Infrastructure: Microservices, Active-Active DC, Docker, CI/CD, Nginx, Linux
Messaging: RabbitMQ, MemQ, Event-Driven Architecture
Practices: System Design, Distributed Systems, Database Sharding, REST APIs, DR/BCP, Agile

PROFESSIONAL EXPERIENCE

PhonePe -- UPI Core Transactional Team

Mar 2026 - Present

SDE-2 (Backend Engineer) | 20,000+ peak RPS | 500M+ transactions/day | Pune, India

- Operating on India's highest-traffic payment rail - 20,000+ RPS peak, 500M+ transactions daily
- Building E2C refund status tracking - enabling visibility for 2-2.5L daily refunds (currently zero in-app tracking)
- Owning NPCI contract architecture, UDIR (UPI Dispute Resolution) flows, and external PSP integrations

PhonePe -- BBPS Pod

Feb 2022 - Feb 2026

Software Engineer to SDE-2 (Backend) | 500 peak RPS | 4M+ billpay transactions/day | Pune, India

UPMS -- Greenfield Microservice (Built 0 to 1)

- Built UPMS microservice from scratch - 500+ RPS, 20% transaction growth
- Sharded MariaDB, proxy layer, reconciliation engine, biller kill-switches; NPCI certification; monolith migration with zero downtime

Axon -- Async Messaging Framework

- Created Axon framework - async messaging abstraction achieving 45% infra cost reduction org-wide
- Unified publish API, fallback strategies, dynamic worker pools - adopted across PhonePe engineering

Active-Active Data Center Migration

- Drove Active-Active DC migration - DB circular replication, MemQ integration, zero-downtime failover, 50% blast radius reduction

Status Check Pipeline Overhaul

- Overhauled status-check pipeline - 20,000+ pending/day to <100/day, resolution time 9+ hours to <10 min

Piped Gas Meter Reading (GFF 2025)

- Built in 1 week (contract to production) - demonstrated at Global Fintech Festival 2025, PhonePe-exclusive integration

Additional Contributions

- Migrated Paylink to modern framework - 15% transaction increase | Led Loan API 1.1 - NPCI spec compliance
- Launched 6 bill payment categories; created SOP that eliminated engineering dependency
- Mentoring 3 engineers, driving design decisions, production triage, and unblocking across the pod

Samsung Research Institute

Jul 2021 - Feb 2022

Software Engineer | Noida, India

- Reduced audio device setup time by 30% through Bluetooth module optimization (1,000+ devices)
- Samsung SWC Professional certification (Data Structures & Algorithms)

EDUCATION

B.Tech in Computer Science & Engineering

2017 - 2021

National Institute of Technology, Delhi

RECOGNITION & IMPACT

- "Distinguished" rating (highest tier) - "Completed the implementation flawlessly and quite quickly" - Engineering Manager
- "The BBPS POD can depend on Arjun to pick up any complex tasks now. He has earned the trust of his team" - Manager
- 345 merge requests | 605 tasks delivered | 117 code reviews | 356 docs authored | 6 DR drills
- 4 consecutive strong performance cycles | GFF 2025 live demo | Campus hiring problem statements authored
